

Installation Instructions

WG/WGX Series

OVERVIEW

The Primex Adjust-A-Vent Ceiling Diffusers (WG/WGX Series) are durable, adjustable air supply or exhaust vents.

This ceiling or wall mountable series provides whisper quiet airflow in an unobtrusive and aesthetically pleasing housing.

Pair it with the diffuser collar (DC Series) or the EB4x90 for simple, accurate installation.

INSTALLATION INSTRUCTIONS

1. Securely attach duct to joist or stud. Duct movement can cause grille to dislodge.
2. Confirm duct opening is round, not warped. Warping may affect connection of grille/diffuser.
3. Ensure adequate tension on the mounting tabs and adjust manually if required.
4. Press the grille firmly into place, ensuring a secure connection in the duct opening and a tight seal.

*Consider the use of a mounting collar such as the DC Series or EB4x90 elbow for an accurate, tight fit.

IMPORTANT

Adjust-A-Vent Diffusers should be installed by a professional and comply with all local building codes, standards and regulations.

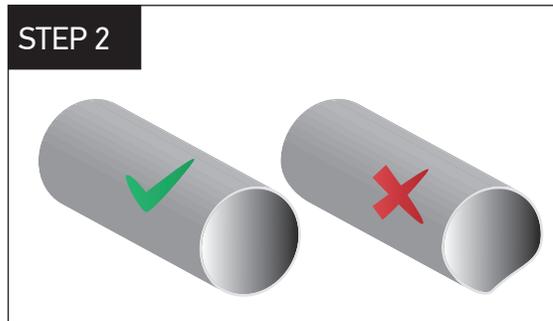

Primex recommends the use of a grille mount such as the DC Series or EB4x90 elbow to ensure a tight, sealed fit and to counter vent warping that could affect diffuser retention in the duct.

WARNING: Grille/diffusers may become dislodged if installed without adequate tension.

STEP 1

STEP 2

Primex recommends using a diffuser collar to counter vent warping and improve retention in the duct.
